

**Amendments to the specification**

Please amend paragraph 0011 found on page 2 of the application as follows:

--The present invention is generally directed to a concrete anchor. The concrete anchor of the present invention can be fabricated by a variety of methods, including drop-forging and casting. The concrete anchor of the present invention can be formed of a variety of materials, including at least one of various steels, irons, \_\_\_\_\_, and the like. For example, the concrete anchor can be formed of a 90,000-psi steel that allows the anchor a 3-ton, 6-ton, or 10-ton capacity with a 4:1 safety factor. Anchors of increasing thickness can allow for a greater weight capacity to be achieved.--
